

Zynxis Employee Security Checklist

A simple guide every employee must follow to keep company data and accounts safe

A. Password Rules

1. Use a password that is at least 12 characters long, with a mix of uppercase letters, lowercase letters, numbers, and special characters (e.g. ! @ # \$).
2. Never use your name, birthdate, username, or the company name as part of your password.
3. Do not reuse the same password across different accounts or websites.
4. Change your password every 90 days, or immediately if you suspect it has been exposed.
5. Enable Two-Factor Authentication (2FA) on all accounts that support it.

B. Email Safety — How to Spot Phishing

6. Check the sender's email address carefully. A slightly misspelled domain (e.g. "zynxis.com" instead of "zynxis.com") is a warning sign.
7. Never click links or open attachments from unknown or unexpected senders.
8. Be suspicious of emails that create urgency or fear, such as "Your account will be suspended" or "Act immediately."
9. Hover over a link before clicking to see the real web address it leads to, instead of trusting the visible text.
10. If an email looks suspicious, report it to the IT/Security team instead of replying or forwarding it.

C. Safe Internet Use

11. Only visit websites that use HTTPS (look for the padlock icon in the browser address bar).
12. Avoid downloading software or files from unofficial or unknown websites.
13. Do not connect to public Wi-Fi for work tasks unless using a company-approved VPN.
14. Keep your browser, operating system, and antivirus software updated at all times.

D. What to Do If Your Account Is Hacked

15. Immediately change your password from a different, trusted device.
16. Report the incident to the IT/Security team right away — do not wait or try to handle it alone.
17. Check your account for any unfamiliar activity, such as emails sent that you did not write, or login locations you do not recognize.
18. Enable Two-Factor Authentication if it was not already active, once account access is restored.

E. Handling Company Files

- 19.** Store company files only in approved, official company storage systems, not on personal drives or personal cloud accounts.
- 20.** Never share confidential company files with anyone outside the company without proper authorization.
- 21.** Always lock or log out of shared computers after accessing company files.
- 22.** Delete or securely dispose of sensitive files that are no longer needed, rather than leaving them on the desktop or downloads folder.

F. Device and Lock Screen Rules

- 23.** Always lock your device (Windows + L on Windows) whenever you step away from your desk, even for a short time.
- 24.** Set your device to lock automatically after a short period of inactivity (e.g. 2–5 minutes).
- 25.** Never share your device password or PIN with anyone, including coworkers.
- 26.** Do not leave company laptops or devices unattended in public places.

Following this checklist helps protect not only your own account, but also the entire company's data and reputation. When in doubt, always ask the IT/Security team before taking action.
